- 7 Cet appareil ou système de protection et toute autre variante acceptable de celui-ci sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités dans cette annexe.

This equipment or protective system and any acceptable variation thereto is specified in the Annex of this certificate and the descriptive documents therein referred to.

- 8 L'INERIS, organisme notifié et identifié sous le numéro 0080, conformément aux articles 17 and 21 de la directive 2014/34/UE du Parlement Européen et du Conseil, datée du 26 février 2014, et accrédité par le COFRAC sous le n° 5-0045 dans le cadre de l'activité de certification de produits et services (portée disponible sur www.cofrac.fr) certifie que cet appareil ou système de protection répond aux Exigences Essentielles de Sécurité et de Santé en ce qui concerne la conception et la construction des appareils et des systèmes de protection destinés à être utilisés en atmosphères explosives, décrites en annexe II de la Directive.

INERIS, notified body and identified under number 0080, in accordance with Articles 17 and 21 of Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014, and accredited by COFRAC under number 5-0045 for certification of products and services (scope of accreditation available on the website www.cofrac.fr), certifies that this equipment or protective system fulfils the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive.

Les procédures de certification sont disponibles sur www.ineris.fr.

The rules of certification are available on INERIS website on: www.ineris.fr.

Les examens et les essais sont consignés dans le rapport :

The examinations and the tests are recorded in report:

N° 31912

9 Le respect des Exigences Essentielles de Sécurité et de Santé est assuré par :

The respect of the Essential Health and Safety Requirements has been assured by:

- la conformité à / *Conformity with:*

EN 60079-0 : 2012/A11 : 2013	IEC 60079-0 : 2011
EN 60079-1 : 2014	IEC 60079-1 : 2014
EN 60079-11 : 2012	IEC 60079-11 : 2011
EN 60079-31 : 2014	IEC 60079-31 : 2013

- les solutions spécifiques adoptées par le fabricant pour satisfaire aux Exigences Essentielles de Sécurité et de Santé décrites dans les documents descriptifs / *Specific solutions adopted by the manufacturer to meet the Essential Health and Safety Requirements described in the descriptive documents*

10 Si le signe X est placé à la suite du numéro de l'attestation d'examen UE de type, il indique que cet appareil ou système de protection est soumis à des conditions spéciales d'utilisation, mentionnées dans l'annexe de la présente attestation.

If the sign X is placed after the Number of the EU type examination certificate, it indicates that this equipment and protective system is subject to the Specific Conditions of Use, mentioned in the annex of this certificate.

11 Cette attestation d'examen UE de type se rapporte uniquement à la conception, aux examens et essais de l'appareil ou système de protection spécifié conformément à la directive 2014/34/UE. D'autres exigences de cette Directive s'appliquent à la fabrication et à la fourniture de cet appareil ou système de protection, celles-ci ne sont pas couvertes par cette attestation.

This EU-Type Examination Certificate relates only to the design, examinations and tests of the specified equipment or protective system in accordance to the Directive 2014/34/EU. Further requirements of the Directive apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.

12 Le marquage de l'appareil ou du système de protection doit contenir :

The marking of the equipment or the protective system shall include the following:

<input checked="" type="checkbox"/> II 2 G	ou/or	<input checked="" type="checkbox"/> II 2 D	ou/or	<input checked="" type="checkbox"/> II 2 GD	ou/or

13

ANNEXE**15 DESCRIPTION DE L'APPAREIL OU DU SYSTEME DE PROTECTION :**

Les coffrets SSD... sont réalisés en acier au carbone, acier inoxydable ou aluminium pour les groupes IIB, IIB+H2 et IIIC. Le couvercle peut être équipé de charnières.

Les coffrets peuvent contenir principalement des composants électriques "NSI" et/ou des éléments certifiés de "SI". Les coffrets comportant des éléments "NSI" et "SI" sont prévus avec une sonde thermique interne.

Les coffrets peuvent être équipés avec des composants de type certifiés tels que défini en Annexe.

Tels que défini dans les instructions, en fonction du type, de la taille et du matériau des coffrets, le couvercle doit être fixé avec des vis en acier de qualité minimale A2-80, A4-80, 8.8 ou 12.9.

Ces coffrets possèdent les degrés de protection IP6X, IPX6, IP65 ou IP66 selon la norme EN/IEC 60529.

PARAMETRES RELATIFS A LA SECURITE :

Paramètres électriques / Electrical parameters :	
Tension maximale des éléments "NSI" : <i>Maximum supply voltage of "NIS" elements:</i>	24 kVac - 1500 Vdc.
Tension maximale des éléments "SI" : <i>Maximum supply voltage of "IS" elements</i>	250 V.
Puissance maximale absorbée : <i>Maximum absorbed power:</i>	3500 kVa
Courant nominal : <i>Nominal current:</i>	2000 A
Fréquence : <i>Frequency:</i>	50/60/400 Hz.
Section des bornes/bus-bars: <i>Cross section of terminals/bus-bars:</i>	1,5÷300 mm ² /20÷600 mm ²
Débit maximum du ventilateur : <i>Maximum cooling fan flow rate:</i>	25 m ³ /h pour des volumes de coffrets supérieurs à 32dm ³ / For volumes of the enclosures greater than 32dm ³
Puissance maximale de la lampe de signalisation : <i>Maximum power of the signalling lamp:</i>	- 1 watt LED - 3 watt incandescent (avec classe de température T4/T135°C) / (with temperature class T4/T135°C)

La puissance maximale dissipée est fonction du type de coffret, de la classe de température et de la température ambiante définis dans les documents descriptifs du fabricant.

Les différents paramètres des composants Ex installés sur les coffrets sont définis dans les certificats respectifs.

Les coffrets sont destinés à être utilisés dans la gamme de température ambiante de -20°C à +60°C.

13

ANNEX**15 DESCRIPTION OF THE EQUIPEMENT OR THE PROTECTIVE SYSTEM :**

The SSD.. enclosures are made of carbon steel, stainless steel or aluminum for groups IIB, IIB+H2 and IIIC. The lid can be hinged to the enclosure.

The enclosures are intended to contain mainly electrical "NIS" elements and/or with certified "IS" element. The enclosures fitted with internal "NIS" and "IS" elements are provided with an internal thermal probe.

These enclosures can be fitted with some certified components as listed in Annex.

As specified in the instructions, following the type, the size, and the material of the enclosures, the cover should be fixed with screws having the minimum quality A2-80, A4-80, 8.8 or 12.9.

These enclosures get the degree of protection IP6X, IPX6, IP65 or IP66 in accordance with EN/IEC 60529.

PARAMETERS RELATING TO THE SAFETY :

The maximum dissipated power is in accordance with the type of enclosure, the temperature class and the ambient temperature as stipulated in the descriptive documents of the manufacturer.

The different parameters of the Ex components installed on the enclosures are defined in the respective certificates.

The enclosures could be used in the range of ambient temperatures from -20°C up to +60°C.

Pour les coffrets T6/T85°C contenant des éléments "NSI" et "SI" le seuil de coupure du thermostat sera/ For enclosures T6/T85°C fitted with "NSI" and "SI" elements the threshold of thermal probe shall be:

Température ambiante des éléments de SI / Ambient Temperature of "SI" element	Seuil de coupure du thermostat / Threshold of release of the thermal probe
55°C	53°C ± 3% ou/ or 51°C ± 6% ou/ or 49°C ± 10%
60°C	58°C ± 3% ou/ or 56°C ± 6% ou/ or 54°C ± 10%
70°C	67°C ± 3% ou/ or 66°C ± 6% ou/ or 63°C ± 10%

MARQUAGE :

Le marquage doit être lisible et indélébile ; il doit comporter les indications suivantes :

ABTECH LIMITED
Sheffield S9 2QJ - UK
SSD...(1)
INERIS 13ATEX0019X
(Numéro de série)
(Année de construction)

(*)
Ex db (***) IIB ou IIB+H2 T(**) Gb
Ex tb (***) IIIC T(**) Db
IP(***)
... °C < Tamb < ... °C (**)
T. Câble : (**)

Entrée de câble : voir instructions

AVERTISSEMENTS :

NE PAS OUVRIR SI UNE ATMOSPHERE EXPLOSIVE PEUT ETRE PRESENTE.

Marquage additionnel dans le cas où des disjoncteurs sont montés sur le coffret :

NE PAS MANŒUVRER EN CHARGE

(1) Les points sont remplacés par une codification en accord avec les variantes d'exécution. Les différents types sont indiqués dans les documents descriptifs.

(*) Une des catégories suivantes :
II 2 G ou II 2 D ou II 2 GD ou II 2 (1) G ou II 2 (1) D ou II 2 (1) GD ou II 2 (2) G ou II 2 (2) D ou II 2 (2) GD

(**) Le type de protection, la classe de température, la température ambiante, les degrés de protection et la température du câble seront adaptés en accord avec différents facteurs comme l'équipement interne, la température ambiante et la puissance maximale dissipée définis dans les documents descriptifs.

L'ensemble du marquage peut être réalisé dans la langue du pays d'utilisation.

L'appareil ou le système de protection doit aussi porter le marquage normalement prévu par les normes de construction qui le concernent.

MARKING :

Marking has to be readable and indelible; it has to include the following indications:

ABTECH LIMITED
Sheffield S9 2QJ - UK
SSD...(1)
INERIS 13ATEX0019X
(Serial number)
(Year of construction)

(*)
Ex db (***) IIB or IIB+H2 T(**) Gb
Ex tb (***) IIIC T(**) Db
IP(***)
... °C < Tamb < ... °C (**)
T. Cable : (**)

Cable entry: see instructions

WARNINGS:

DO NOT OPEN WHEN AN EXPLOSIVE ATMOSPHERE MAY BE PRESENT.

Additional warning in case of disconnectors are fitted on the enclosures:

DO NOT OPERATE UNDER LOAD

(1) The dots are replaced by a codification according to the manufacturing variations. The different types are indicated in the descriptive documents.

(*) One of the following categories:
II 2 G or II 2 D or II 2 GD or II 2 (1) G or II 2 (1) D or II 2 (1) GD or II 2 (2) G or II 2 (2) D or II 2 (2) GD

(**) The type of protection, temperature class, the ambient temperature, degrees of protection and cable temperature will be updated in accordance with different factors as the internal equipment, ambient temperature and maximum power dissipated defined in the descriptive documents.

Marking may be carried out in the language of the country of use.

The protective system or equipment has also to carry the marking normally stipulated by its construction standards.

EXAMENS ET ESSAIS INDIVIDUELS :

Chaque exemplaire du matériel ci-dessus défini doit avoir subi avec succès, avant livraison conformément au § 16.1 de la norme EN/IEC 60079-1, une épreuve de surpression statique d'une durée comprise entre 10 et 60 secondes sous :

ROUTINE EXAMINATIONS AND TESTS:

Each pieces of equipment defined above has to have successfully passed; before delivery in accordance with clause 16.1 of the EN/IEC 60079-1 standard, an overpressure test of a period comprised between 10 and 60 seconds under:

Type du coffret / Size of enclosure	Pression pour une température ambiante jusqu'à -20°C : / Pressure for an ambient temperature down to -20°C:
De SSD001 jusqu'à SSD667 / From SSD001 up to SSD667	12.2 bar
De SSD627 jusqu'à SSD778/ From SSD627 up to SSD778	11.6 bar

16 DOCUMENTS DESCRIPTIFS :

Les documents descriptifs cités ci-après, constituent la documentation technique de l'appareil, objet de la présente attestation.

16 DESCRIPTIVE DOCUMENTS :

The descriptive documents quoted hereafter constitute the technical documentation of the equipment, subject of this certificate.

Titre / Title	Réf. / Ref.	Rév. / Rev.	Date / Date
Notice d'instruction ABTECH (17 pages) / ABTECH <i>Instruction notice (17 pages)</i>	ABTQ-119	02	2016-11-08
Plan de marquage ABTECH (1 page) / Marking drawing (1 page)	ABT25511	B	2016-11-18

17 CONDITIONS SPECIALES D'UTILISATION :

- Les joints antidéflagrants ont des valeurs différentes de celles spécifiées dans les tableaux de la norme EN/IEC 60079-1 pour toute réparation contacter le constructeur.

Lors de l'utilisation des composants couverts par les certificats INERIS 13ATEX9016U et INERIS 13ATEX9017U :

- La longueur des joints antidéflagrants est supérieure aux valeurs spécifiées dans les tableaux de la norme EN/IEC 60079-1.
- Lors de l'installation l'utilisateur devra tenir compte du fait que le voyant type EFL*PC* n'a subi qu'un choc mécanique faible à 2J.

Les instructions d'utilisation sont complétées par celles spécifiées dans la notice d'instructions du fabricant et des composants constitutifs de l'équipement final.

17 SPECIFIC CONDITIONS OF USE:

- The flameproof joints have a different values from those specified in the tables of the EN/IEC 60079-1 standard, for any repair to contact the manufacturer.

When using the components covered by the certificates INERIS 13ATEX9016U and INERIS 13ATEX9017U :

- The widths of the flameproof joints are superior than those specified in tables of 60079-1 standard.
- During the installation, the user will take into consideration that pilot light type EFL*PC* underwent only a shock corresponding to an energy of a low risk at 2J

The instructions for safe use are completed by those stipulated in the instructions manuals of the manufacturer and of each component fitted on the final product.

18 EXIGENCES ESSENTIELLES DE SECURITE ET DE SANTE :

Le respect des Exigences Essentielles de Sécurité et de Santé est assuré par :

- La conformité aux normes listées au paragraphe (9).
- L'ensemble des dispositions adoptées par le constructeur et décrites dans les documents descriptifs.

19 REMARQUES :

L'indice 00 fait référence à l'attestation d'examen CE de type N°INERIS 13ATEX0019X émis précédemment conformément à la directive 94/9/CE.

Les modifications de l'indice 01 concernent :

- Mise à jour de la définition des matériels.
- Application des normes EN 60079-1 : 2014/IEC60079-1 : 2014, IEC 60079-31 : 2014/IEC 60079-31 : 2013.
- Application de la nouvelle Directive 2014/34/UE.
- Mise à jour de la liste des accessoires pouvant être installés sur et dans les coffrets et des différents Ex composants listés en annexe.
- Mise à jour des puissances maximales dissipées dans les coffrets.
- Modification des paramètres électriques.
- Ajout de nouvelles tailles et ajout de hublots pour toutes les tailles
- Augmentation de l'interstice du joint plan du coffret à 0,2 mm pour l'utilisation en groupe IIB.
- Suppression de la liste des certificats des éléments "IS".
- Modification de l'épaisseur minimale des coffrets.
- Modification du type de résine pour le scellement des hublots.
- Ajout d'un nouveau degré de protection.

18 ESSENTIAL HEALTH AND SAFETY REQUIREMENTS :

The respect of the Essential Health and Safety Requirements is ensured by:

- *Conformity to the standards quoted in clause (9).*
- *All provisions adopted by the manufacturer and defined in the descriptive documents.*

19 REMARKS :

The issue 00 refers to the EC-type examination certificate N° INERIS 13ATEX0019X issued previously according to the Directive 94/9/EC.

The changes of the issue 01 are regarding:

- *Update of the apparatus definition.*
- *Application of the standards EN 60079-1:2014/IEC 60079-1: 2014, EN 60079-31: 2014/IEC 60079-31:2013.*
- *Application of the new Directive 2014/34/EU.*
- *Update the list of accessories which can be fitted on/in the enclosures and some different Ex components listed in Annex*
- *Update of the maximum dissipated powers inside the enclosures.*
- *Modification of the electrical parameters.*
- *Add new sizes of enclosures and window for all sizes.*
- *Increase the gap up to 0.2 mm of the flanged joint of the enclosures for use in Group IIB.*
- *Deletion of the list of the certificates for the "IS" elements.*
- *Modification of the minimum thickness of the enclosures.*
- *Modification of the type of resin cementing for the windows.*
- *Added new degree of protection.*

Additional warning in case of disconnectors are fitted on the enclosure: DO NOT OPERATE UNDER LOAD

1.2 IMPORTANT – READ CAREFULLY

Control, check, signal, automation, interruption and/or protection units in explosion proof enclosures SSD.../. Series shall be installed in conformity to the prescriptions of the standard EN/IEC 60079-14 (Edit in force) and the maintenance operations shall be made in conformity to the prescriptions of the standard EN/IEC 60079-17 (Edit in force). Besides the user shall know about the risks due to the electric current and the chemical and physical characteristics of the gas and/or vapours and dust present in the plant.

To further guarantee of the good quality/safety of the product, the Quality System of Abtech was evaluated and approved by a Notified Body which makes the surveillance of the quality and the verification at every stage of manufacture.

Abtech, assures and guarantees the correct manufacture of its products and, so that they can guarantee a safety result, it is indispensable that the Buyer and/or the User apply all the measures of security for which they are responsible for the purposes of a correct installation and a correct maintenance, according to the instructions and the suggestions of Abtech, and according to the national and local laws in matter of installation and prevention of the accidents.

The use of a certified apparatus subjected to interventions not explicitly authorized by Abtech, excludes every responsibility of Abtech and will cause the invalidation of the relative EU Type Examination Certificate and IECEx certificate and the contractual warranty.

2 Type of protection “Ex db” - Flameproof enclosures “

- 2.1 In this mode of protection, the electric equipment is placed in an enclosure which can withstand the pressure developed during an internal explosion and which prevents the transmission of the explosion to the explosive atmosphere surrounding the enclosure.
- 2.2 The integrity of the enclosure shall not be impaired by: unauthorized holes or drillings, incorrectly installed lid, or cable entry/holes which have not been closed or fitted with appropriate certified cable glands, conduit or stopping devices with the same thread of cable entry.
- 2.3 Unused holes and/or cable entries shall be equipped with suitable certified accessories such as Ex d plugs, Ex d cable glands, Ex d three piece unions, etc....
The accessories shall have the same thread of the cable entry and guarantee a number of threads engaged ≥ 5 .
- 2.4 The enclosure shall not be subjected to any mechanical stresses or conditions that were not intended during the design and manufacture (i.e. exposure to excessive mechanical impact, exposure to corrosive agents, possibly of internal short circuits with power dissipation greater than the declared level for each enclosure size).
- 2.5 Ensure correct fastening of body-lid according to the values showed in Table 1.

Table 1 – Screws tightening torque

Screw	M6	M8	M10	M12	M14	M16	M20
Torque (Nm)	5-7	10-20	20-30	34-60	53-80	83-140	160-200

- 2.6 When connected with conduit, a suitable stopping device shall be fitted a maximum distance of 450 mm from the enclosure.
- 2.7 Cable entries shall be fitted with certified cable glands, appropriate for the cable being fitted and the type of protection and in accordance with EN/IEC 60079-14 (Edit in force), and any special condition imposed by the cable gland certificate.

3 Installation

- 3.1 Before installation, it is the Users responsibility to ensure that the apparatus is suitable for the intended application.
- 3.2 Verify that the certified apparatus is suitable for the hazardous area classification.
- 3.3 Verify that the gas or dust group of the certified apparatus is suitable for any gases, vapours or combustible dust hazard that may be present.
- 3.4 Verify that the temperature class and/or the maximum surface temperature of the certified apparatus is suitable for any flammable gases, vapours or combustible dust hazards that may be present.
- 3.5 The certified apparatus shall be installed and operated within the service limits specified for which it was built (voltage, current, mechanical impact, and ambient temperature specified in the rating/certification plate and thermal dissipation).
- 3.6 Ensure all electrical and mechanical connections are securely made.
- 3.7 Verify the integrity and the continuity of earth, protection or equipotential bonding.
- 3.8 Ensure no modification(s) not authorised by Abtech, that compromise the electrical and/or mechanical structure and functionality of the certified apparatus have been made. (e.g. the alteration of the content of certified enclosures with the addition of further equipment or components).
- 3.9 Ensure that all electrical protection devices are fully functioning.

4 Maintenance

- 4.1 The maintenance of the SSD enclosure range is critical to the performance and safe operation of the apparatus. The maintenance operations shall be made and carried out in accordance with EN/IEC 60079-17 (Edit in force).
- 4.2 It is imperative that a routine maintenance programme is carried out at regular intervals, the timing of which shall be made by the responsible person and taking into account, environmental conditions and ambient temperatures that the apparatus is subjected to. In any case, the equipment shall be inspected at least every 2 (two) years.
- 4.3 The maintenance is necessary to guarantee the safe operation of the apparatus within the hazardous area and strict adherence to the apparatus certificate and these maintenance instructions is essential.
- 4.4 The maintenance operations shall be carried out by competent personnel, whose training has included instructions on the characteristics of the apparatus and the protection type employed.
- 4.5 Any repairs or modifications to the equipment, not using Abtech spare parts, shall be agreed in writing with Abtech to ensure compliance with the certificate and to ensure any additional tests or verification that may be required.
- 4.6 All the maintenance operations shall be made with the electrical apparatus isolated or when an explosive atmosphere is not present.
- 4.7 When reassembling flameproof enclosures, the user shall verify that the flameproof joints are not damaged, all joints shall be thoroughly cleaned and lightly smeared with a suitable not hardening grease to prevent the corrosion and enhance environmental protection. It cannot be too strongly emphasized that extreme care should be exercised in the selection and application of the grease to ensure non-hardening grease is used, this will aid subsequent separation of the flameproof joints.
- 4.8 Only non-metallic brushes and non-corrosive cleaning fluids shall be used to clean flameproof joints and paths.
- 4.9 Anti condensation devices, such as thermal probes, breathing, draining or heating elements, shall be checked periodically to ensure correct operation (if installed).
- 4.10 If the certified apparatus is subject to vibrations, verify that the clamping screws, internal connections and conduit and/or cable entries are securely and properly fitted.
- 4.11 If the user shall replace the body-lid-closing screws, it is imperative that screws having the same characteristics are used.

5 Special condition for safe use

- 5.1 The gap between the lid and the enclosure is less than the values specified in the tables of IEC/EN 60079-1 standard. The length of the flameproof joint is greater than those specified in tables of IEC/EN 60079-1 standard.
- 5.2 The apparatus with type of protection Ex db or Ex tb, shall only be used in an ambient temperature specified on the marking plate, if nothing is specified, ambient temperature should be considered from -20°C to +40°C.
- 5.3 The apparatus with type of protection Ex db [ia] or Ex db [ib] shall only be used to an ambient temperature from -20°C up to +60°C.
- 5.4 The temperature class for SSD enclosure with IS associated apparatus [i.] inside is T6/T85 °C.
- 5.5 When intrinsically safe terminals are fitted, only intrinsically safe circuits shall be connected to these terminals and the User shall ensure that the connections are compatible within the limitation of use.
- 5.6 When enclosure contains non-intrinsically safe devices and intrinsically safe devices together, the enclosure shall be fitted with an internal thermostat. The thermostat connected with a suitable device, shall de-energize the circuit when the internal temperature reaches the max ambient temperature of the barrier in function of the IS circuit maximum operating temperature. The special conditions for safe use are complemented by those described in the examination certificates of each device (certified as component) as part of the final equipment. The other conditions of use are stipulated in the instructions.

- 5.7 When installing equipment, care shall be taken to prevent the flameproof flange joints approaching nearer than the distance specified in Table 2 to any solid obstacle which is not part of the equipment, such as steelwork, walls, weather guards, mounting brackets, pipes or other has been tested at a smaller distance of separation and has been documented.

Table 2 – Minimum distance of obstruction from the flameproof flange joints related to the gas group of the hazardous area

Gas group	Minimum distance mm
IIB	20
IIB + H ₂	30

6 Maximum painting thickness

The maximum painting thickness is showed in table 3.

Table 3 – Limitation of thickness of non-metallic layer

Gas group	Minimum thickness mm
IIB	2
IIB + H ₂	0,2

7 Parameters relating to safety

- 7.1 Maximum electrical specifications:

DC voltage	1500 Vdc;
AC voltage	24 kVac;
Frequency	50 / 60 / 400 Hz;
Nominal current	2000 A;
Rated/Nominal Power	3500 kVA;
Terminals cross section	300 mm ² ;
Bus-bar cross section	600 mm ² ;
IS associated voltage	Um ≤ 250 V

The electrical specification of intrinsic safety circuits are marked on the IS associated apparatus.
It is possible to install internal fan (max cooling fan flow rate: 25 m³/h for V>32dm³).

- 7.2 Enclosure of EPL Gb having type of protection Ex db, has a temperature class (T rating) according to par. 8. Enclosure of EPL Gb Db in addition to the temperature class has a maximum surface temperature rating according to par. 8.
- 7.3 Enclosure having type of protection Ex db [i.] is designed by the category of the associated apparatus [ia] or [ib]. Follows the requirements of standard EN/IEC 60079-14 for the installation and the safety distances.
- 7.4 Cables: maximum service temperature of cables is shown on the marking label when necessary. The Buyer and/or the User shall use a connection cable having a maximum service temperature not lower than indicated on the marking label.
- 7.5 The degree of protection is indicated in Marking data. To grant the above degree of protection all installed accessories shall have the same degree of protection or superior.

The enclosures with windows are only feasible for temperature class T6/T85° or T5/T100°C or T120°C or T4/T135 °C.

The cable temperature is defined as follows table:

Table 5 – Cable Temperature

Max surface temperature	Tmax cable
≤ 120 °C	80°C
120 °C ÷ 135 °C	90°C
135 °C ÷ 200 °C	110°C
